- Tamp safely with our countertop-friendly tamping system
- PID temperature control and pre-infusion
- Metal conical burr grinder with 15 grind sizes
- 250 g bean container to ensure their freshness
- European design with anti-fingerprint coated metal housing

Highlights

58 mm steel portafilter

Indulge in a rich coffee and crema from home. The Barista Brew espresso machine is designed with a professional-grade 58mm stainless steel portafilter and single & dual-walled filter baskets. This portafilter size allows you to create a beautiful golden-brown espresso with aromatic foamy crema while providing more consistent extraction across the coffee puck due to a wider distribution of water. Plus, it accommodates a larger dose of coffee grounds for a richer and more robust brew.

Premium calibrated tamper

Tamp your ground coffee beans effortlessly using the stainless steel calibrated tamper with a flathead. When brewing coffee with the Philips semi-automatic coffee machine, use the right tamping pressure and create a balanced, consistently leveled tamping surface. Elevate your coffee brewing experience with precision and ease.

Americano button

Immerse yourself in the essence of a true Americano with just a simple press of a button. With the Philips Barista Brew, you now have the added convenience of an integrated hot water outlet.

Stainless-steel milk jug

Enjoy the ease of creating smooth microfoam perfect for latte art with our 450 ml stainless-steel milk jug and powerful steam wand. Achieve that velvety texture effortlessly and savour your coffee just the way you like it.

Pressure gauge

Achieve precise water pressure thanks to the integrated pressure gauge that guides your brewing status and alerts you when optimal pressure has been reached.

Countertop-safe tamp system

Elevate your coffee routine with our countertop-safe tamping system. Achieve the perfect tamp confidently and conveniently, without any risk to your countertops thanks to the integrated tamping rubber on the bottom of the portafilter.

PID temperature control

The PID temperature control system ensures the accuracy and stability of brewing temperature. The pre-infusion system helps prevent a channelling effect. Only full integration of both systems can ensure a balanced extraction.

Metal conical burr grinder

Uncover new flavour depths with 15 different grind sizes (super-fine to coarse) from the metal conical burr grinder. To enhance your espresso's flavours, consider using a finer grind, like setting 4, in your recipes.

250gr bean container

Dive into a world of coffee variety with the 250 g bean container that preserves their freshness. Elevate your coffee experience while ensuring that each brew retains its rich aroma.

Specifications

Energy efficiency

Standby mode power consumption: 0.45 W
Off mode power consumption: n/a
Networked standby mode power consumption: n/a
Period before automatic switching into standby mode: 30 min
Measurement standard: EN 50564:2011

Technical specifications

Grinder material: Metal
Pump pressure: 15 bar
Noise level: <78 dB
Voltage: 230 V
Frequency: 50 Hz
Weight of the product: 8.6 kg
Product dimensions: 410 x 320 x 334 mm (H x W x L)
