

MPN: FIBLCATT2

## Fibre Optic Adapter LC M - F

The Fibre Optic Attenuator 10dB (FIBLCATT2) is a crucial component for managing signal strength in fiber optic networks. This ST-ST attenuator precisely reduces optical power by 10dB, preventing signal overload that can degrade performance and damage sensitive equipment. Essential for maintaining optimal signal levels in high-speed data transmission, the FIBLCATT2 ensures reliable and consistent network operation. Built to European quality standards, this attenuator reflects MicroConnect's commitment to providing dependable connectivity solutions backed by over 20 years of industry expertise. Trust MicroConnect for premium quality and precise performance in your fiber optic network infrastructure.

## Specifications

|                    |                |                                                                 |
