

Statement of Volatility – Dell Pro Dock WD25Z

⚠ CAUTION: A CAUTION indicates either potential damage to hardware or erasure of data and tells you how to avoid the problem.

The Dell Pro Dock WD25Z contains both volatile and non-volatile components. Volatile components erase their data immediately after power is removed from the component. Non-volatile components continue to retain their data even after power is removed from the component. The following non-volatile components are present in the Dell Pro Dock WD25Z.

Table 1. List of non-volatile components on system board

Description	Reference designator	Volatility description	User accessible for external data	Remedial action (action necessary to erase data)
MST hub SPI ROM	UV18	Non-volatile memory size 8 Mbit, stores MST(DP) hub FW	No	N/A
USB3 Gen2 hub SPI ROM	UU29	Non-volatile memory size 4 Mbit, stores USB3 Gen2 hub FW	No	N/A
USB3 Gen2 hub SPI ROM	UU31	Non-volatile memory size 4 Mbit, stores USB3 Gen2 hub FW	No	N/A
DMC (or Dock EC)	UE1	Non-Volatile memory Flash, Store EC program code to control GPIO and communication with many devices of dock using i2C interface	No	N/A
UFP PD	UP5	Non-volatile memory, stores UFP PD FW	No	N/A
DFP PD	UP15	Non-volatile memory, stores DFP PD FW	No	N/A

⚠ CAUTION: All other components on the system board erase data if power is removed from the docking station.
